

" Clothing Stores Are Missing This UX Detail "

A DESIGN THOUGHT –
THROUGH A UX LENS

What if mannequins helped you choose better clothes?

Standard Mannequin

**Multiple mannequins
with different skin
tones**

A UX idea for retail spaces

**Ever tried on a color that looked great on the hanger – but felt off when you wore it?
That's because clothing color and skin tone matter – a lot.**

The Problem !

Most mannequins in stores don't reflect real-world skin tone diversity.

This limits how customers visualize what will suit them best.

**WHERE'S
THE
REPRESENTATION ?**

Imagine if clothing stores used diverse mannequins to display clothes – across a range of skin tones.

This simple shift could guide customers to choose colors that truly suit them.

UX is not just for screens.

**It's about creating intuitive, inclusive experiences –
wherever the user is.**

Why It Matters (UX Angle)

- ☒ **Better decision-making**
- ☒ **More inclusivity**
- ☒ **Improved shopping confidence**
- ☒ **Bridging visual UX to physical retail**

Would this idea improve your shopping experience?

Have you seen something like this before?

Let's talk UX and inclusivity in real life.

"I'd love to hear your thoughts on this approach."
